Introduction

This tutorial will take you through some of the things you need to consider when embedding or referring to images in your work.

It will show you how to attribute image and it will signpost where to find guidance about referencing images.

Please note: links will open in a new window.

Back to Contents

Image Attribution

When you embed any image in your own work you need to give acknowledgement of the original creator.

This acknowledgment will have several elements:

- title of image/figure
- name of creator/author
- link to the original work
- link to the hosting platform/website
- conditions of reproduction or Creative Commons Licence
- any other type of recognition specified by the creator

Back to Contents

Formatting the image attribution

You need to format the attribution according to the type of context where the image is going to appear. This could be:

- Print context
- Digital context

Image credits in a digital context are structured differently and often in a simpler way than image citations in a print context:

- In a digital context you can hyperlink the main elements of the attribution
- In a print context you add the key urls of the elements of the attribution

Back to Contents
Print and Digital formatting

Format the attribution according to the type of context where the image is going to appear:

Attributing images in a print context
Include the key elements of an attribution incorporating the main urls in a caption underneath the image.

The attribution will be in the form a caption underneath the reproduction and it will include:

- Title of image
- Name/username of creator
- Url of image
- Conditions of reproduction or Creative Commons licence
- Url of licence deed or of the site with the statement of the conditions of reproduction

Crediting images in a digital context
When writing for the web in blogs and websites or when doing presentations, you just need to include the key hyperlinked elements of an attribution in a caption to appear underneath the image.

Format the attribution according to the conditions of reproduction specified in the website you got the image from. This will usually include:

- Title of image hyperlinked to the original work
- Name/username of creator hyperlinked to online profile/website of creator
- Conditions of reproduction or Creative Commons licence hyperlinked to licence deed.

Remixed image attribution

If you, or someone else, change an image in any way by:

- cropping
- changing the colours
- adding extra graphic or written elements
- modifying it in any way

You, or the new creator, will be creating a derivative work of the original. The original image should always be attributed too, together with attributing the remixed image.

**Please note, you can only create a derivative work if the licence of the image permits so.**

For Creative Commons images, if the licence says **ND**, e.g. CC-BY-NC-ND, that means **No Derivatives**, and you cannot modify the image in any way.

Formatting a remixed image attribution

In a derivative work, always attribute the original image too.

Attributing remixed images in a print context

Include the key elements of the attribution incorporating the main urls in a caption underneath the image which will contain the phrase “is adapted from” or “is a derivative of”. This will usually include:

- Title of remixed image
- Add “is adapted from” or “is a derivative of”
- Title of original image
- Name/username of original creator
- Conditions of reproduction/Terms of use or Creative Commons licence of original
- Url of original work
- Name/username of creator of the remixed image
- Conditions of reproduction/Terms of use or Creative Commons licence of remixed image
- Url of remixed work if it is available online
Crediting remixed images in a digital context
Include the key hyperlinked elements of the attribution in a caption underneath the image. Use the phrase “is a derivative of” or “is adapted from” and attribute the original image as per usual. The attribution will usually include:

- Title of the remixed image, hyperlinked if hosted online
- Add “is a derivative of” or “is adapted from”
- Hyperlinked title of the original image
- Name/username of original creator hyperlinked to online profile/website of author/creator
- Conditions of reproduction or Creative Commons licence hyperlinked to licence deed of original
- Name/username of the creator of the remixed image, hyperlinked if profile is online
- Conditions of reproduction or Creative Commons licence hyperlinked to licence deed of remixed

Creative Commons 0 image attribution

Creative Commons 0 images are released into the Public Domain by their creators using the CC0 Tool or similar statement.

This means these images are free of copyright for all to use, modify and share for any purpose.

Usually CC0 images do not require attribution but it is always good practice to acknowledge the source by linking back to the source site or adding the urls for easy reference.

Some creators who release their work into the Public Domain actively encourage attribution of their images.

Over to you...

Remember to check the licence terms of any images you want to use in your work.

When using sites which aggregate images, it is also important to go to the original image source and check who owns it and what the reuse terms are.

Attribution is about giving the rightful and legitimate credit to artists and creators.

Always remember to also reference images in any academic work: see the Library Referencing Guides.

Summary

You have reached the end of this resource. This information has been adapted from the Attributing images tutorial.
